HODL - $BEANS

Whitepaper

Introduction:

The HODL token is a BEP20 reward token designed to incentivize holders to keep holding the token for a long period of time. The token is built on the Binance Smart Chain (BSC) and has a unique 10/10% tax structure, where 5% of each transaction is distributed as BNB rewards to holders, 3% goes towards marketing efforts, 1% is dedicated to liquidity, and the remaining 1% is used for buyback purposes. The token is called $BEANS and is set to revolutionize the DeFi space by providing a sustainable and profitable investment opportunity for token holders.

Tokenomics:

The total supply of HODL tokens is set at 1 million, with no plans for any further minting. This will ensure that the token's value remains stable and is not diluted by additional token issuance. The initial liquidity of the token is set at 100% of the total supply, which is locked in a liquidity pool on PancakeSwap.

BNB Rewards:

The HODL token rewards its holders with 5% of each transaction in the form of BNB tokens, which are sent directly to their wallets. This incentivizes long-term holding and provides a steady stream of passive income for token holders. This % will also keep increasing as we're growing, the higher the market-cap, the higher the % of rewards.

Marketing Tax:

The marketing tax of 3% is used to fund marketing and advertising campaigns that promote the token to potential investors. This will help to increase awareness of the token and attract new investors to the project, ultimately leading to an increase in the token's value.

Liquidity Tax:

The liquidity tax of 1% is used to provide additional liquidity to the token's liquidity pool on PancakeSwap. This ensures that there is sufficient liquidity to facilitate trading on the exchange and provides stability to the token's price.

Buyback Tax:

The buyback tax of 1% is used to buy back HODL tokens from the open market. These tokens are then used for further marketing strategies or burned, effectively reducing the total supply of the token in circulation. This will help to increase the value of the remaining tokens, benefiting all token holders.

Token Utility:

The HODL token has several use cases, making it a versatile and valuable asset in the BSC ecosystem. Firstly, it provides holders with a passive income stream through the BNB rewards, incentivizing long-term holding and reducing sell pressure on the token. Secondly, the token can be used as a means of payment for goods and services within the HODL community, creating a real-world use case for the token.

Roadmap:

The HODL team has a comprehensive roadmap for the development and expansion of the token. In the short term, the team plans to continue building the community through marketing efforts and partnerships with other DeFi projects. In the long term, the team plans to develop additional DeFi products and services, including a HODL lending platform and a HODL decentralized exchange.

Community:

The HODL community is at the heart of the project, and the team is committed to building a strong and engaged community around the token. The community is made up of HODL holders, developers, marketers, and supporters, all working together to promote the token and its use cases. The team regularly engages with the community through social media, Telegram, and other channels, providing regular updates on the project's progress and listening to feedback from the community.

Conclusion:

The HODL token is a unique and innovative BEP20 reward token that provides a sustainable and profitable investment opportunity for token holders. With its 10/10% tax structure, including BNB rewards, marketing tax, liquidity tax, and buyback tax, the token is designed to remain stable and valuable over the long term. With a comprehensive roadmap and a strong and engaged community, the HODL token is set to become a major player in the DeFi space.
